

Cisco Tetration Analytics Ecosystem

From the very beginning we started communicating and collaborating with a diverse ecosystem of industry leaders so we could take a holistic approach to solving customer challenges. We're working together on robust solutions that will extend current capabilities to help solve some of our customers' toughest problems and unlock new use cases. Together, we believe there is inherently great potential in our efforts, and that the end results will be much bigger than the "sum of our individual parts."

Here's a sample of what our ecosystem members are excited about:

AlgoSec

"We find natural synergies between AlgoSec and Cisco Tetration Analytics platform and are excited to extend our partnership to help joint customers manage application security at the speed of business," said Anner Kushnir, VP Technology, at AlgoSec. "AlgoSec's Security Policy Management Solution with Cisco Tetration Analytics will deliver unprecedented end-to-end visibility and automated enforcement of security policies across a highly distributed and hybrid environment in a compliant and a risk-free manner."

Citrix Systems

"Cisco and Citrix are collaborating to deliver a new solution based on Cisco Tetration Analytics and Citrix NetScaler Management and Analytics Systems (MAS), designed to provide end-to-end data center visibility, analytics and security," said Ash Chowdappa, Vice President/General Manager, NetScaler ADC, Citrix Systems. "We look forward to helping our customers continue to succeed through further differentiated innovations, specifically around integration with Tetration, Hybrid Cloud with Cisco CloudCenter, Private Cloud with Cisco ACI and Microsoft AzurePack, and micro-services deployments."

Dell EMC

"Dell EMC will engineer Vblock Systems to support the Cisco Tetration Analytics platform to enable our customers to gain additional value from their converged infrastructure," said Trey Layton, SVP and Chief Technical Officer, Converged Platforms Division of Dell EMC. "Vblock integration with Tetration Analytics will enable our customers to benefit enormously from the automatic white-list policy enforcement and continuous compliance assurance".

F5

"Cisco and F5 have been working closely together to help customers achieve application deployment agility, with F5 and Cisco Nexus/ACI," said Calvin Rowland, SVP Business Development & Public Cloud at F5. "I'm excited that we're now extending our successful collaboration to this emerging analytics-driven security space by taking advantage of the L4-7 analytics in F5 BIG-IP along with the security policy enforcement capabilities of Cisco Tetration Analytics. Together we will deliver comprehensive full-stack network analytics, application delivery and security solutions to micro-segment and secure east-west communications in the Data Center."

Tufin Technologies

“As the first Network Security Policy Management (NSPM) provider to work with the Cisco Tetration analytics platform, Tufin truly recognizes the opportunity and the market need for this integration,” said Pamela Cyr, SVP Business Development, Tufin Technologies. “With Tetration policy enforcement capabilities, Tufin can automatically enforce application connectivity and security policies in real-time, across a multi-vendor infrastructure. Using Tufin’s Unified security policy model with Tetration, customers can achieve continuous compliance, adherence to security standards and policy consistency across their data centers, enabling zero-trust operations.”
