

Microsoft, Oracle and SAP Executive Commentary

Microsoft

“Microsoft Exchange Server 2007 and Microsoft Office SharePoint Server 2007 solutions are more collaborative, global, and mission critical than ever before,” said Derek Burney, general manager, SharePoint Tools & Platform, Microsoft. “With Cisco’s end-to-end Application Delivery Network solution and Exchange Server and SharePoint Server, customers can achieve improved application performance and decreased bandwidth utilization across the network. With these technologies working together, customers can experience new levels of application access and productivity.”

Oracle

“Cisco’s end-to-end application delivery network gives customers an excellent foundation of high availability, performance, and security to successfully deploy Oracle Applications,” said Vijay Tella, vice president and chief strategy officer, Oracle Fusion Middleware Development. “With validated architectures for Oracle E-Business Suite, Siebel, PeopleSoft Enterprise, and Oracle Portal, companies can rapidly extend these solutions across the globe.”

SAP

“The powerful Cisco and SAP relationship continues to produce results and provide extraordinary value to joint customers by ensuring that next-generation application solutions uniquely leverage people, information and insight,” said Doug Merritt, executive vice president, Business User Development and president, SAP Labs, SAP AG. “In a business network-transformed world, team-based interaction is critical for application performance across distributed networks. Cisco and SAP have the tools and expertise to gain significant viral adoption of these applications for the benefit of a wide-range of users.”
